Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
FILE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: US/09/949,016
PRIOR FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR APPLICATION NUMBER: 60/237,768
PRIOR FILING DATE: 2000-10-03
PRIOR APPLICATION NUMBER: 60/231,498
NUMBER OF SEQ ID NOS: 207012
SOFTWARE: FastSeq for Windows Version 4.0
SEQ ID NO 14555
LENGTH: 818128
TYPE: DNA
ORGANISM: Human
NAME/KEY: misc_feature
LOCATION: (1)...(818128)
OTHER INFORMATION: n = A,T,C or G
US-09-949-016-14555
```

```
Query Match      81.6%; Score 20.4; DB 3; Length 818128;
Best Local Similarity 95.5%; Pred. No. 2.3e+02;
Matches 21; Conservative 0; Mismatches 1; Indels 0; Gaps 0;
```

```
QY 1 AAAAAAAAAATCGCAACAAA 22
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

RESULT 1
US-09-949-016-15095/c
; Sequence 15095, Application US/09949016
; Patent No. 6812339
; GENERAL INFORMATION:
; APPLICANT: VENTER, J. Craig et al.
; TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
; WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
; FILE REFERENCE: C1001307
; CURRENT APPLICATION NUMBER: US/09/949,016
; CURRENT FILING DATE: 2000-04-14
; PRIOR APPLICATION NUMBER: 60/241,755
; PRIOR FILING DATE: 2000-10-20
; PRIOR APPLICATION NUMBER: 60/237,768
; PRIOR FILING DATE: 2000-10-03

PRIOR APPLICATION NUMBER: 60/231,498
; PRIOR FILING DATE: 2000-09-08
; NUMBER OF SEQ ID NOS: 207012
; SOFTWARE: FastSeq for Windows Version 4.0
; SEQ ID NO 15095
; LENGTH: 93510
; TYPE: DNA
; ORGANISM: Human
; FEATURE:
; NAME/KEY: misc_feature
; LOCATION: (1)...(93510)
; OTHER INFORMATION: n = A,T,C or G
US-09-949-016-15095

Query Match 83.2%; Score 20.8; DB 3; Length 93510;
Best Local Similarity 91.7%; Pred. No. 89;
Matches 22; Conservative 0; Mismatches 2; Indels 0; Gaps 0;

Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: C1001307
CURRENT APPLICATION NUMBER: US/09/949,016
PRIOR FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR APPLICATION NUMBER: 60/237,768
PRIOR FILING DATE: 2000-10-03
PRIOR APPLICATION NUMBER: 60/231,498
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 207012
SOFTWARE: FastSeq for Windows Version 4.0
SEQ ID NO 13267
LENGTH: 46323
TYPE: DNA
ORGANISM: Human
US-09-949-016-13267

Query Match 76.8%; Score 19.2; DB 3; Length 46323;
Best Local Similarity 87.5%; Pred. No. 3.3e+02;

Matches 21; Conservative 0; Mismatches 3; Indels 0; Gaps 0;

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Sequence 40, Application US/08755587
Patent No. 604597
GENERAL INFORMATION:
APPLICANT: Futreal, Phillip A
APPLICANT: Wooster, Richard F
APPLICANT: Ashworth, Alan
APPLICANT: Stratton, Michael R
TITLE OF INVENTION: Materials and methods relating to the
TITLE OF INVENTION: Identification and sequencing of the BRCA2 cancer
NUMBER OF SEQUENCES: 222
CORRESPONDENCE ADDRESS:
ADDRESSEE: Bell Seltzer Park & Gibson

STREET: 310 UCB Plaza, 3605 Glenwood Avenue, PO Drawer 31107
CITY: Raleigh
STATE: NC
COUNTRY: USA
COMPUTER READABLE FORM:
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25 (EPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/755,587

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

TITLE OF INVENTION: Staphylococcus aureus Polynucleotides and Sequences
NUMBER OF SEQUENCES: 5256
CORRESPONDENCE ADDRESS:

ADDRESSEE: Human Genome Sciences, Inc.
STREET: 9410 Key West Avenue
CITY: Rockville
STATE: Maryland
COUNTRY: USA
ZIP: 20850

COMPUTER READABLE FORM:

MEDIUM TYPE: Diskette, 3.50 inch, 1.4mb storage
COMPUTER: HP Vectra 486/33
OPERATING SYSTEM: MSDOS version 6.2
SOFTWARE: ASCII Text

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/956,171E
FILING DATE: 20-Oct-1997
CLASSIFICATION: <Unknown>

PRIOR APPLICATION DATA:
APPLICATION NUMBER: 60/009,861
FILING DATE: January 5, 1996
APPLICATION NUMBER: 08/781,986
FILING DATE: January 3, 1997

ATTORNEY/AGENT INFORMATION:
NAME: Mark J. Hyman
REGISTRATION NUMBER: 46,789
REFERENCE/DOCKET NUMBER: PB248P1
TELEPHONE: (240) 314-1224
TELEFAX: (301) 309-8439

INFORMATION FOR SEQ ID NO: 1119:
SEQUENCE CHARACTERISTICS:
LENGTH: 265 base pairs
TYPE: nucleic acid
STRANDEDNESS: double
TOPOLOGY: linear

SEQUENCE DESCRIPTION: SEQ ID NO: 1119:
US-08-956-171E-1119

Query Match 74.4%; Score 18.6; DB 3; Length 265;
Best Local Similarity 84.0%; Pred. No. 3.5e+02;
Matches 21; Conservative 0; Mismatches 4; Indels 0; Gaps 0;

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 Contact: submissions@watson.wustl.edu
 ----- Summary Statistics
 Center project name: H_NH0074M11
 Drafting Center: WIBR

 NOTICE:
 This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

 MAPPING INFORMATION:
 Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

 SOURCE INFORMATION:
 The RPCT-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Moon, P.Y., Zhao, B., Frengen, E., Tateo, M., Catanese, J.J., and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
 VECTOR: pBACe3.6

 NEIGHBORING SEQUENCE INFORMATION:
 The clone sequenced to the left is AC005699, 2000 bp overlap: the clone sequenced to the right is RP11-16817. Actual end of this clone is at base position 149964 of RP11-74M11.
 Data from AC024335 was used to finish this clone, AC024968.
 The sequence of AC024968 has been incorporated into AC104686.

 White, S.
 Direct Submission
 Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
 Clone requests: clonerequests@sanger.ac.uk
 On Jul 25, 2002 this sequence version replaced gi:12539691.
 The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
 Em: EMBL; SW: SWSPPROT; Tr: TRMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/projects/C_elegans/wormpep
 This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1
 RP11-239B6 is from the library RPCT-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
 VECTOR: pBACe3.6

AL139234

LOCUS DEFINITION
AL139234 90007 bp DNA linear PRI 18-MAY-2005
Human DNA sequence from clone RP3-438D16 on chromosome Xq24-26.1
contains the PDC8 gene for programmed cell death 8
(apoptosis-inducing factor) (AIF), the RAB33A gene for RAB33A,
member RAS oncogene family (SIO, Rabs10), the 3' end of a novel
gene (FLJ20095) and two Cpg islands, complete sequence.

ACCESSION
AL139234
AL139234.19 GI:14787430
HTG: AIF; Cpg island; FLJ20095; PDC8; RAB33A; Rabs10; SIO.
SOURCE
Homo sapiens (human)
ORGANISM
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
Homnidae; Homo.
1 (bases 1 to 90007)
Bird.C.
Direct Submission
Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Jul 17, 2001 this sequence version replaced GI:13751266.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome X, constructed by the Sanger Centre Chromosome X Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/ChX
RP3-438D16 is from the library RPCT-3 constructed by the group of
Pleier de Jong. For further details see
http://www.chori.org/bacpac/home.htm

Submitted (19-NOV-2003) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
humquery@sanger.ac.uk Clone request: clonerequest@sanger.ac.uk
On Nov 21, 2003 this sequence version replaced gi:20564422.
This sequence was originally produced by Genome Therapeutics
Corporation 100 Beaver Street, Waltham, MA 02453, USA.
The clone was found to contain a deletion, and has been resubmitted
in two pieces to aid construction of the chromosome 10 tiling path.

Submitted (19-JAN-2001) The Institute for Genomic Research, 9712
Medical Center Dr, Rockville, MD 20850, USA, cdtown@tigr.org
On Jan 19, 2001 this sequence version replaced g1:12280766.
Addres all correspondence to:at@tigr.org

BAC clone F15C21 is from Arabidopsis thaliana chromosome 1
The orientation of the sequence is from Sp6 to T7 end of the BAC
clone.
Genes were identified by a combination of several methods: Gene
prediction programs including GenScan+ (Chris Burge,
http://CCR-081.mit.edu/GENSCAN.html), GenemarkMM (Mark Borodovsky,

http://genemark.biology.gatech.edu/Genemark/), Glimmer4 (a variant
of Glimmer3, see Mihalea Perlea,
http://www.tigr.org/softlab/glimmer4/glimmer4.html, and
GenesSplicer (Mihalea Perlea and Steven Salzberg, contact
mperlea@tigr.org), searches of the complete sequence against a
peptide database and the plant EST database at TIGR
(http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to
indicate the level of evidence for their annotation. Genes with
similarity to other proteins are named after the database hits.
Genes without significant peptide similarity but with EST
similarity are named as unknown proteins. Genes without protein
or EST similarity, that are predicted by more than two gene
prediction programs over most of their length are annotated as
hypothetical proteins. Genes encoding tRNAs are predicted by
tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).
Simple repeats are identified by RepeatMasker (Arian Smit,
http://ftp.genome.washington.edu/RM/RepeatMasker.html).

```

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as low coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases.

Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:

http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

LOCUS
DEFINITION
Human DNA sequence from clone RP1-84N20 on chromosome 6 Contains a
novel gene, the 5' end of the TPD52L1 gene encoding two variants of
tumor protein D52-like 1 protein and two CpG islands, complete
sequence.
AL136128 151875 bp DNA linear PRI 18-MAY-2005
AL136128.9 GI:10443357
HTG; CpG island; D52; TPD52L1.
SOURCE
Homo sapiens (human)
Organism
Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
Homnidae; Homo.
1 (bases 1 to 151875)
Almeida,J.
Direct Submission
Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Oct 1, 2000 this sequence version replaced gi:9796103.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em, EMBL; Sw, SWISSPROT; Tr, TREMBL; Wp, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr6
RP1-84N20 is from the library RP1-1 constructed by the group of
Piter de Jong. For further details see
http://www.chori.org/bacpac/home.htm
VECTOR: pCYPAC2

Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: vegas@sanger.ac.uk
-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 26 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
1      1193: contig of 1193 bp in length
*
*      1194      1293: gap of unknown length
*      1294      2365: contig of 1072 bp in length
*      2366      2465: gap of unknown length
*      2466      4408: contig of 1943 bp in length
*      4409      4508: gap of unknown length
*      4509      5733: contig of 1225 bp in length
*      5734      5833: gap of unknown length
*      5834      7359: contig of 1526 bp in length
*      7360      7459: gap of unknown length
*      7460      10297: contig of 2838 bp in length
*      10298      10397: gap of unknown length
*      10398      13797: contig of 3400 bp in length
*      13798      13897: gap of unknown length
*      13898      16242: contig of 2345 bp in length

1 (bases 1 to 161841)	CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the features listing.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 8 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Direct Submission
Submitted (19-JAN-2000) Whitehead Institute/MIT Center for Genome
Research, 320 Charles Street, Cambridge, MA 02141, USA
On Apr 8, 2000 this sequence version replaced gi:6899688.
All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)
http://ftp.genome.washington.edu/RM/RepeatMasker.html

Project Information
Center project name: L5882
Center clone name: 388 O 17

Summary Statistics
Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 149025 bases at least Q40
Consensus quality: 158058 bases at least Q30
Consensus quality: 162087 bases at least Q20
Insert size: 18600; agarose-fp
Insert size: 165633; sum-of-contigs
Quality coverage: 3.5 in Q20 bases; agarose-fp
Quality coverage: 3.9 in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently
* consists of 33 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

AL451107 172779 bp DNA linear PRI 18-MAY-2005
LOCUS Human DNA sequence from clone RP11-14C22 on chromosome 10 Contains
DEFINITION the gene for a novel protein similar to lysozyme C-1 (l
4-beta-N-acetylmuramidase C EC 3.2.1.17) (MGC33408), three novel
genes and a supervillin pseudogene (SVIL), complete sequence.
ACCESSION AL451107.6 GI:14148855
VERSION HTG; lysozyme; MGC33408; supervillin; SVIL.
KEYWORDS Homo sapiens (human)
SOURCE Homo sapiens
ORGANISM Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
Homnidae; Homo.

Draft Sequence Produced by Whitehead Institute/MIT Center for
```

```
Genome Research, 320 Charles Street,
Cambridge, MA 02141, USA
http://www-seq.wi.mit.edu
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

Project Information

Center project name: CX72

Center clone name: RP43-011D19

Summary Statistics

Sequencing clone based: PUC18; 86% of reads

Whole genome shotgun: 14% of reads

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 189654 bases at least Q40

Consensus quality: 189687 bases at least Q30

Consensus quality: 189691 bases at least Q20

Quality coverage: 10.15x

 This sequence was generated with the support of external whole genome shotgun data (<http://www.ncbi.nlm.nih.gov/Traces/trace.fcgi>) as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

 Neighboring sequence information:
 This clone is overlapped by RP43-057B02.

Sequence Quality Assessment:

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp. Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

 * NOTE: This is a 'working draft' sequence. It currently

* consists of 2 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submitor.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.
 * 1 58947: contig of 58947 bp in length
 * 58948 59047: gap of unknown length
 * 59048 189791: contig of 130744 bp in length.

Source information:
The PTB1 chimpanzee BAC library was prepared from DNA isolated from
cultured cells established from the blood of a single male
chimpanzee.
Clones may be obtained from Aseo Fujiyama and co-workers
(http://www.gsc.riken.go.jp).
VECTOR: pKS145

-----
Sequence Quality Assessment:
This entry has been annotated with sequence
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than 1 error in
10,000 bp.
-----
Neighboring clones: RP43-015P20(left) and PTB-071B01(right).

 Web site: <http://genome.wustl.edu>
 Contact: saplens@wustl.edu
 ----- Summary Statistics
 Center project name: H_NH0592C12

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
 The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see <http://www.nhgri.nih.gov/DIR/GRB/CHR7>, send <mailto:egreen@nhgri.nih.gov>, or see <http://genome.wustl.edu>

SOURCE INFORMATION:
 The RPc1-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Caranese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org> VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
 The clone sequenced to the left is RP11-52501, 2000 bp overlap the clone sequenced to the right is A093117, 2000 bp overlap. Actual start of this clone is at base position 72833 of RP11-52501.

-----
* NOTE: This record contains 76 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

COMMENT

----- Genome Center

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: LCVN

Center clone name: CH250-272N21

----- Summary Statistics

Chemistry: Dye-terminator Big Dye; inf% of reads

Consensus quality: 1956 bases at least Q40

Consensus quality: 5110 bases at least Q30

Consensus quality: 6437 bases at least Q20

* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)

* NOTE: The contigs are based on the application

* of the PCI method using the Human genome (NCBI build 31)

* as the comparative genome.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submitter.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

1 147263: contig of 147263 bp in length.

 COMMENT ----- Genome Center
 Center: Wellcome Trust Sanger Institute
 Center code: SC
 Web site: http://www.sanger.ac.uk
 Contact: humquerry@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.
 Where differences are found these are annotated as variations
 together with a note of the overlapping clone name. Note that the
 variation annotation may not be found in the sequence submission
 corresponding to the overlapping clone, as we submit sequences with
 only a small overlap as described above.
 This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one plasmid subclone or more than one M13 subclone; and the
 assembly was confirmed by restriction digest, except on the rare
 occasion of the clone being a YAC.
 The following abbreviations are used to associate primary accession
 numbers given in the feature table with their source databases:
 Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
 on the WORMPEP database can be found at
 http://www.sanger.ac.uk/Projects/C_elegans/wormpep/LA04NC01-247F6
 is from a Los Alamos flow-sorted 4 library VECTOR: sCos-1.

 Primer A: No sequence submitted
 Primer B: No sequence submitted
 STS size: 460
 Protocol:

WGS-discovery (WGS) :

Paired-end low-coverage whole genome shotgun reads were generated from 9 breeds (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador Retriever, English Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each) and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the Californian Coyote).

The WGS reads were placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 863872 reads were annotated as STSs and 485941 SNPs were annotated with alleles from the boxer and the breed or canid from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.

WGA-discovery (WGA) of Boxer/Poodle SNPs:

A second set of SNPs was generated using a similar methodology except that the contigs from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this sequence lacked base quality scores, arbitrary quality scores of phred 40 were assigned before the poodle sequence was placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated with alleles from the boxer and the poodle. The validation rate for these SNPs was estimated at approximately 100%.

Internal-WGA-discovery (I-WGA) :

A third set of SNPs were discovered by comparing reads in the WGA assembly. SNPs were defined as mismatch positions that had a base quality of >= 30 on both reads in a region that aligned without gaps, and with at most one additional mismatch in the ten flanking bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were annotated with alleles between the two boxer alleles. The validation rate for these SNPs was estimated at approximately 100%.

PT	Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT	comprises a nucleotide sequence.
PS	Claim 1; SEQ ID NO 1504; OPD; English.
XX	
CC	The present invention relates to novel DNA and protein sequences which
CC	are associated with carcinomas. The sequences are useful for: (i) for
CC	screening drug candidates; (ii) for screening of bioactive agent capable
CC	of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC	a bioactive agent capable of modulating the activity of CAP; (iv) for
CC	evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC	carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC	carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC	(x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC	determining Carcinoma Associated (CA) gene copy number. In addition, the
CC	CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC	carcinoma including lymphoma. The present sequence is one such CA coding
CC	sequence. Note: This patent is an equivalent to basic patent

XX
XX Isolated nucleic acids and polypeptides, useful for preventing diagnosing
XX and treating e.g. leukemia, inflammation and immune disorders.
XX
XX Claim 1; SEQ ID NO 6767; 1399pp + Sequence Listing; English.
XX
XX The invention relates to human polynucleotides (AA179941-AA193841) and
XX the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to
XX cytokine, cell proliferation or cell differentiation or which may induce
XX production of other cytokines in other cell populations. The
XX polynucleotides and polypeptides are useful in gene therapy, vaccines or
XX peptide therapy. The polypeptides have various cytokine-like activities,
XX e.g. stem cell growth factor activity, haematopoiesis regulating
XX activity, tissue growth factor activity, immunomodulatory activity and
XX activin/inhibin activity and may be useful in the diagnosis and/or
XX treatment of cancer, leukemia, nervous system disorders, arthritis and
XX inflammation. Note: The sequence data for this patent did not form part
XX of the printed specification, but was obtained in electronic format
XX directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX Identifying or predicting (the predisposition of) CAD, monitoring a
XX subject identified as having CAD before and after treatment or the

```

```

Pr progression or severity of CAD by determining specific peptide/gene
Pt expression levels.
Ps Claim 7; SEQ ID NO 17; 136pp; English.
Pp
Pq The invention describes a method of identifying or predicting (the
Pr predileposition of) coronary artery disease (CAD), monitoring a subject
Ps identified as having CAD before and after treatment or the progression or
Pp severity of CAD comprises determining the level of one or more peptides
Pr or gene expression of at least one gene given in the specification in a
Pp subject to provide a first value and in a control or reference standard
Pr to provide a second value, and comparing whether there is a difference
Pp between the first value and second value. Also described are: screening
Pr candidate agents for use in treatment of CAD; treating or preventing CAD;
Pp manufacture of a medicament for the treatment or prevention of CAD
Pr comprising an agent that can induce a decrease in the level of gene
Pp expression, synthesis, or activity of at least one gene or gene
Pr expression products; and a kit for the identifying or predicting the
Pp predileposition CAD in a subject comprising: instructions for determining
Pr the peptide level and/or level of gene expression; control or reference
Pp standard peptide level and/or level of gene expression from a normal
Pr subject(s) without CAD for at least one gene or peptide cited above. A
Pp substance comprising an agent that can induce a decrease in the level of
Pr gene expression, synthesis, or activity of at least one gene or gene
Pp expression product or the level of at least one disease over control
Pr and/or predominant in Disease peptide and/or induce an increase in the
Pp level of at least one control over Disease and/or Predominant in Control
Pr peptide and/or a decrease in gene expression, synthesis, or activity of
Pp at least one gene or gene expression product is useful for manufacturing
Pr a medicament for the treatment or prevention of CAD. The method is useful
Pp for identifying or predicting (the predileposition of) CAD, monitoring a
Pr subject identified as having CAD before and after treatment or monitoring
Pp the progression or severity of CAD, thus treating CAD. This sequence
Pr represents a PTEN induced putative kinase 1 polynucleotide, a highly
Pp predictive gene used to determine the severity of coronary artery
Pr disease.

 DR P-PSDB; ADCT1301.
 XX Novel colon specific polypeptides and nucleic acids, useful for
 PT identifying, diagnosing, monitoring, staging, imaging and treating colon
 PT cancer and non-cancerous disease states in colon tissue.
 XX
 PS Claim 1; SEQ ID NO 64; 262bp; English.
 XX
 CC This invention relates to novel nucleic acid molecules and the encoded
 CC polypeptides, which are present in normal and neoplastic colorectal
 CC cells. Specifically, it refers to antibodies of these colon specific
 CC polypeptides, as well as antagonists and agonists thereof that can be
 CC used to treat colon cancer and also non-cancerous diseases states of the
 CC colon. The present invention describes methods useful for the diagnosis
 CC and monitoring of colon cancer metastases in a patient, by determining
 CC the concentration of these colon specific proteins in a patient sample.
 CC Furthermore, they are also used for gene therapy purposes, the production
 CC of transgenic animals and cells, as well as producing engineered colon
 CC tissue for treatment and research. This polynucleotide sequence is a
 CC human colon specific cDNA sequence of the invention.

PT New nucleic acid derived from genes associated with DNA repair, useful
PT for diagnosis, e.g. of ataxia telangiectasia, by determination of
PT cytosine methylation.
XX
PS Claim 1; SEQ ID NO 124; 25pp + Sequence Listing; English.
XX
CC The invention relates to nucleic acids containing a sequence of at least
CC 18 nucleotides of chemically treated DNA of genes associated with DNA
CC repair, and their complements. The invention also relates to nucleic
CC acids comprising at least 18 base pairs of the chemically pretreated DNA
CC of genes associated with DNA repair selected from PMS2L1, PMS2L2,
CC PMS2L3, PMS2L4, PMS2L5, PMS2L6, MGMT, MSH2, NUDT1, TDG, INPPL1,
CC RFC4, DDT1L, FANCB, or XRCC8. Nucleic acids of the invention and related
CC oligomers, are useful for diagnosis of diseases associated with gene
CC repair, specifically ataxia telangiectasia, aging, Bloom's syndrome,
CC Cockayne syndrome, Nijmegen breakage syndrome or Werner syndrome,
CC immunodeficiency, trichthodystrophy, Fanconi's anaemia, solid tumours
CC and cancer, particularly by determining status of cytosine methylation
CC and/or by detecting single-nucleotide polymorphisms. Determination of
CC individual methylation patterns may allow development of individualised
CC therapies. The sequences given in records ABL92192-ABL92335 represent
CC chemically pre-treated DNA fragments from genes associated with DNA
CC repair, and their complements. Note: The sequence data for this patent is
CC not represented in the specification, but is based on sequence

 XX
 CC The present invention relates to the isolation of novel human connective
 CC tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide
 CC (DNA and genomic) sequences encoding them. The sequences of the
 CC invention are useful in the diagnosis, treatment, prevention and/or
 CC prognosis of diseases associated with connective tissue(s), including
 CC cancer. The polynucleotide sequences of the invention are also useful in
 CC gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the
 CC novel human connective tissue related polypeptides. Note: The sequence
 CC data for this patent did not form part of the printed specification, but
 CC was obtained in electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

XX for diagnosis, e.g. of ataxia telangiectasia, by determination of
XX cytosine methylation.
XX
XX
XX Claim 1; SEQ ID NO 43; 25pp + Sequence Listing; English.
XX
XX
XX The invention relates to nucleic acids containing a sequence of at least
XX 18 nucleotides of chemically treated DNA of genes associated with DNA
XX repair, and their complements. The invention also relates to nucleic
XX acids comprising at least 18 base pairs of the chemically pretreated DNA
XX of genes associated with DNA repair selected from PMS2L1, PMS2L12,
XX PMS2L2, PMS2L3, PMS2, L4, PMS2L5, MGMT, MSH2, NUDT1, TDG, INPPL1,
XX RFC4, DIT1L, FANCB, XRCB8. Nucleic acids of the invention and related
XX oligomers, are useful for diagnosis of diseases associated with gene
XX repair, specifically ataxia telangiectasia, aging, Bloom's syndrome,
XX Cockayne syndrome, Nijmegen breakage syndrome or Werner syndrome,
XX immunodeficiency, trichothiodystrophy, Fanconi's anaemia, solid tumours
XX and cancer, particularly by determining status of cytosine methylation
XX and/or by detecting single-nucleotide polymorphisms. Determination of
XX individual methylation patterns may allow development of individualised
XX therapies. The sequences given in records ABL92192-ABL92335 represent
XX chemically pre-treated DNA fragments from genes associated with DNA
XX repair, and their complements. Note: The sequence data for this patent is
XX not represented in the specification, but is based on sequence
XX information supplied by the European Patent Office

 PS Claim 1; Page 52-53; 97pp; English.
 CC The invention relates to chemically modified DNA of genes associated with
 CC DNA adducts, oligonucleotides and/or peptide nucleic acid (PNA) oligomers
 CC for detecting cytosine methylations as well as method for ascertaining
 CC genetic and/or epigenetic parameters of genes associated with DNA
 CC adducts. Oligomers of the invention coupled to a solid phase is useful
 CC for manufacturing an arrangement of different oligomers (array) fixed to
 CC a carrier material for analysing diseases associated with the methylation
 CC state of the CpG dinucleotides of chemically pretreated DNA of genes
 CC associated with DNA adduct. They are also useful for ascertaining genetic
 CC and/or epigenetic parameters for the diagnosis and/or therapy of existing
 CC diseases or the predisposition to specific diseases by analysing cytosine
 CC methylations. Sequences of the invention are useful for diagnosis and
 CC therapy of solid tumors and cancers. They are also useful in gene
 CC therapy. The present sequence is chemically pretreated human genomic DNA
 CC associated DNA adducts

 PT Oligonucleotide for diagnosis and therapy of diseases associated with
 PT signal transduction e.g. cancer, comprises chemically modified genomic
 PT sequences of genes associated with signal transduction.
 XX
 PS Claim 1; SEQ ID NO 12; 24pp; English.
 CC The present invention relates to chemically modified DNA sequences of
 CC signal transduction associated genes. The DNA sequences are chemically

CC modified using a solution of bisulphite, hydrogen sulphite or disulphite.
CC Also disclosed are oligonucleotides and/or RNA oligomers for detecting
CC the cytosine methylation state (CpG islands) of these genes, and a method
CC for the diagnosis and/or therapy of genetic and epigenetic parameters of
CC genes associated with signal transduction. The genomic DNA can be
CC obtained from cells or cellular components which contain DNA, e.g. cell
CC lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,
CC tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
CC brain, heart, prostate, lung, breast or liver, histologic object slides,
CC and all their possible combinations. The sequences of the invention are
CC useful for the diagnosis and therapy of diseases associated with signal
CC transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent
CC chemically pretreated genomic DNA sequences of different genes associated
CC with signal transduction, or their complementary sequences. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from the
CC European Patent Office

PT Nucleic acid, useful for diagnosis and therapy of diseases associated
PT with cell signalling e.g. cancer, comprises chemically modified genomic
PT sequences of genes associated with cell signalling.

PS Claim 1; SEQ ID NO 14; 24pp + Sequence listing; English.

CC The invention relates to a nucleic acid comprising a sequence of at least
CC 18 bases of a segment of chemically pretreated DNA of genes associated
CC with cell signalling. The activity of the modified sequences of the
CC invention may be described as cytostatic. The object of the invention is
CC to provide the chemically modified DNA of genes associated with cell
CC signalling, as well as oligonucleotides and/or RNA-oligomers for
CC detecting cytosine methylations, as well as a method which is
CC particularly suitable for the diagnosis and/or therapy of genetic and

CC epigenetic parameters of genes associated with cell signalling. The
CC chemically modified DNA provided by the invention is useful for diagnosis
CC and therapy of diseases such as solid tumours and cancer. The sequences
CC given in records ABL70111-ABL70626 represent chemically pre-treated
CC genomic DNA's of genes associated with cell signalling. Note: The
CC sequence data for this patent is not represented in the printed
CC specification, but is based on sequence information supplied by the
CC European Patent Office

PT New nucleic acid sequences from chemically modified genes associated with
PT gene regulation, useful for analyzing cytosine methylations for diagnosis
PT and therapy of diseases e.g. severe combined immunodeficiency disease.

PS Claim 1; SEQ ID NO 12; 26pp; English.

CC The invention relates to 224 nucleic acid sequences comprising at least
CC 18 bases of a chemically pretreated gene associated with gene regulation
CC selected from 43 known genes (or complementary sequences). The chemical
CC pretreatment converts cytosine bases unmethylated at the 5-position to
CC uracil or another base with hybridisation behaviour dissimilar to
CC cytosine, to enable analysis of cytosine methylations. The DNA sequences,
CC oligomers (or sets/arrays) and method are useful in the diagnosis of
CC diseases (or predisposition to diseases) associated with gene regulation
CC and in therapy of such diseases, by enabling analysis of the cytosine
CC methylation patterns of such genes, kits are provided. They are

DR Novel human cancer associated protein encoded within open reading frame
PT of cancer associated gene, useful as targets for diagnosing cancer.
PS Claim 16; SEQ ID NO 308; 182bp; English.
CC The invention relates to cancer-associated proteins (CAP) and the cancer-
CC associated (CA) nucleic acids encoding them. The invention also relates
CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC potential drug involving providing a cell that expresses a CA gene,
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a human CA gene of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_ptc_sequences

 XX
 PT Single copy genomic hybridization probes for detecting specific nucleic
 PT acid sequences in sample by in situ hybridization useful for detection of
 PT acquired or inherited genetic diseases.
 XX
 PS Example 1; SEQ ID NO 324; 30pp; English.
 XX
 XX The invention relates to a nucleic acid hybridization probe comprising a
 CC labelled, single copy nucleic acid of at least 50 nucleotides, which
 CC will hybridize to a deduced single copy sequence interval in target
 CC nucleic acid (TNA) of known sequence. The single copy sequence is deduced
 CC by comparing the target nucleic acid (e.g. a disease causing gene) with a
 CC collection of high and low complexity repeat sequences as found in the
 CC genome of the organism from containing the target nucleic acid. The probe
 CC is generated by PCR on the target sequence. The probe is essentially free
 CC of blocking nucleic acid sequences which will hybridize to repeat
 CC sequences within the genome of which the TNA is a part, and is labelled
 CC with a label selected from fluorochrome-responsive labels, fluorochromes,
 CC calorimetric chemical, conjugated proteins, antibodies, antigens and
 CC their mixtures. The probe is useful in a hybridization method, where the
 CC hybridization method is from in situ hybridization, Southern blot, and
 CC other methods in which nucleic acid is immobilized, where the method
 CC further comprises selecting a single copy nucleic acid which will
 CC hybridize to a duplilon or triplicon sequence domain. The probe is useful
 CC for determining the existence of previously unknown repeat sequence
 CC families in a genome. The method comprises reacting a labelled probe with
 CC the genome, causing the probe to hybridize and ascertaining if the probe
 CC hybridizes to the genome at more than three preferably ten different
 CC locations as a determination of new repeat sequence family, where the
 CC determining step comprises selecting the single copy sequence from a
 CC duplilon or triplicon sequence domain. The probe is useful for
 CC determining a chromosome breakpoint and is useful in the fields for
 CC cytogenetics and molecular genetics for determining the presence of
 CC specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
 CC the probes may be used to analyse specific chromosomal locations by in
 CC situ hybridization as a detection of acquired or inherited genetic
 CC diseases especially for detection of genetic or neoplastic disorders.
 CC Unlike prior art techniques, the probe permits more precise chromosomal
 CC breakpoint determinations by in situ hybridization. The genomic sequence
 CC comprising the human HIRA gene (histone cell cycle regulation defective,
 CC S. cerevisiae, homologue A) was analysed for single copy sequence
 CC intervals for use as probes of the invention. HIRA is located on
 CC chromosome 22 as a duplicate, deletions of 1 copy lead to DiGeorge and
 CC Velo-Cardio-facial syndromes. The present sequence is a high complexity
 CC repeat found within the human genome used to analyse the HIRA gene for
 CC repeat regions. Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic format
 CC directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030224356.

 PT Single copy genomic hybridization probes for detecting specific nucleic
 PT acid sequences in sample by in situ hybridization useful for detection of
 PT acquired or inherited genetic diseases.
 XX
 PS Example 1; SEQ ID NO 324; 67pp; English.
 XX
 XX The invention describes a nucleic acid hybridization probe (I) comprising
 CC a labelled, single copy nucleic acid of at least 50 nucleotides, which
 CC will hybridize to a deduced single copy sequence interval in target
 CC nucleic acid (TNA) of known sequence. (I) is useful in a hybridization
 CC method which comprises preparing a reaction mixture comprising TNA and
 CC (I) which hybridizes to TNA, and causing (I) to hybridize to TNA, where
 CC the hybridization method is from in situ hybridization, Southern blot,
 CC and other methods in which nucleic acid is immobilized, where the method
 CC further comprises selecting a single copy nucleic acid which will
 CC hybridize to a duplilon or triplicon sequence domain. (I) is useful for:
 CC determining the existence of previously unknown repeat sequence families
 CC in a genome; determining a chromosome breakpoint and in the fields of
 CC cytogenetics and molecular genetics for determining the presence of
 CC specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
 CC the probes may be used to analyse specific chromosomal locations by in
 CC situ hybridization as a detection of acquired or inherited genetic
 CC diseases especially for detection of genetic or neoplastic disorders.
 CC Unlike prior art techniques, (I) permits more precise chromosomal
 CC breakpoint determinations by in situ hybridization. Hybridization
 CC techniques utilizing (I), have made it possible to obtain reliable,
 CC easily detectable signals with relatively small probes. A readily
 CC detectable signal was obtained with a probe on the order of 2 kb in
 CC length, using fluorescent in situ hybridization (FISH) technology. This
 CC sensitivity of (I) is improved compared to the prior art, because the
 CC probes of (I) are homogeneous single copy sequences. However, smaller
 CC amplified segments, each comprising non-repetitive sequences, may also be

CC used in combination as probes to achieve adequate signals for in situ
 CC hybridization. Complex single copy probes that hybridize to duplicated or
 CC triplicated targets can also increase hybridization signals. This
 CC sequence represents a human HIRA genomic sequence that shows homology to
 CC a known high-complexity repeat sequence family of the human genome and is
 CC used in the creation of an HIRA gene probe.

PT Determining the degree of cytosine methylation in genomic DNA, useful for

PT diagnosis and prognosis, comprises selective hybridization of amplicons

PT from chemically treated DNA.

PS Claim 12; 56pp + Sequence Listing; 56pp; German.

CC This invention describes a novel method for determining the degree of

CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a

CC genomic sample of DNA. The sample is treated chemically to convert

CC cytosine (C) but not methylated C, to uracil, then part of the genomic

CC DNA that contains the target C is amplified to form a labeled amplicon.

CC The amplicon is hybridized to two classes, each with at least one member,

CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the

CC degree of hybridization to both classes is determined from the label on

CC the amplicon. From the ratio of labels hybridized to the two classes of

CC oligomers, the degree of methylation is calculated. The method is used:

CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs

CC and of a wide range of diseases, e.g. cancer, disorders of the central

CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,

CC particularly by detecting mutations or single nucleotide polymorphisms

CC (SNP's); and (ii) for differentiation of cell or tissue types and for

CC investigating cell differentiation. The method allows the methylation

CC status of many C residues to be determined simultaneously. ABQ13410-

CC ABQ54121 represent genomic DNA sequences used to illustrate the method

CC for determining the degree of cytosine methylation described in the

CC disclosure of the invention

PT Determining the degree of cytosine methylation in genomic DNA, useful for

PT diagnosis and prognosis, comprises selective hybridization of amplicons

PT from chemically treated DNA.

PS Claim 12; 56pp + Sequence Listing; 56pp; German.

CC This invention describes a novel method for determining the degree of

CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a

CC genomic sample of DNA. The sample is treated chemically to convert

CC cytosine (C) but not methylated C, to uracil, then part of the genomic

CC DNA that contains the target C is amplified to form a labeled amplicon.

CC The amplicon is hybridized to two classes, each with at least one member,

CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the

CC degree of hybridization to both classes is determined from the label on

CC the amplicon. From the ratio of labels hybridized to the two classes of

CC oligomers, the degree of methylation is calculated. The method is used:

CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs

CC and of a wide range of diseases, e.g. cancer, disorders of the central

CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,

CC particularly by detecting mutations or single nucleotide polymorphisms

CC (SNP's); and (ii) for differentiation of cell or tissue types and for

CC investigating cell differentiation. The method allows the methylation

CC status of many C residues to be determined simultaneously. ABQ13410-

 PS Claim 1; SEQ ID NO 1995; 3071pp + Sequence listing; English.
 CC
 CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
 CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
 CC activity, and can be used in gene therapy and vaccine production. (I)
 CC proteins and polynucleotides may be used in the prevention, diagnosis and
 CC treatment of diseases associated with inappropriate (I) expression. For
 CC example, they may be used to treat disorders associated with decreased
 CC expression by rectifying mutations or deletions in a patient's genome
 CC that affect the activity of (I) by expressing inactive proteins or to
 CC supplement the patient's own production of (I). Additionally, (I)
 CC polynucleotides may be used to produce the secreted (I), by inserting the
 CC nucleic acids into a host cell and culturing the cell to express the
 CC protein. (I) proteins and polynucleotides may be used to prevent,
 CC diagnose and treat immune/haematopoietic-related diseases, especially
 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
 CC to AAK87694 represent human immune/haematopoietic antigen genomic
 CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
 CC represent sequences used in the exemplification of the present invention

 XX from chemically treated DNA.
 XX
 PS Claim 12; 56pp + Sequence listing; 56pp; German.
 CC
 CC This invention describes a novel method for determining the degree of
 CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
 CC genomic sample of DNA. The sample is treated chemically to convert
 CC cytosine (C) but not methylated C, to uracil, then part of the genomic
 CC DNA that contains the target C is amplified to form a labeled amplicon.
 CC The amplicon is hybridised to two classes, each with at least one member,
 CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
 CC degree of hybridisation to both classes is determined from the label on
 CC the amplicon. From the ratio of labels hybridised to the two classes of
 CC oligomers, the degree of methylation is calculated. The method is used:
 CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
 CC and of a wide range of diseases, e.g. cancer, disorders of the central
 CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
 CC particularly by detecting mutations or single nucleotide polymorphisms
 CC (SNP's); and (ii) for differentiation of cell or tissue types and for
 CC investigating cell differentiation. The method allows the methylation
 CC status of many C residues to be determined simultaneously. ABO13410-
 CC ABO54121 represent genomic DNA sequences used to illustrate the method
 CC for determining the degree of cytosine methylation described in the
 CC disclosure of the invention

 PT Determining the degree of cytosine methylation in genomic DNA, useful for
 PT diagnosis and prognosis, comprises selective hybridization of amplicons
 PT from chemically treated DNA.
 PS
 XX Claim 12; 56pp + Sequence Listing; 56pp; German.
 CC This invention describes a novel method for determining the degree of
 CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
 CC genomic sample of DNA. The sample is treated chemically to convert
 CC cytosine (C) but not methylated C, to uracil, then part of the genomic
 CC DNA that contains the target C is amplified to form a labeled amplicon.
 CC The amplicon is hybridised to two classes, each with at least one member,
 CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
 CC degree of hybridisation to both classes is determined from the label on
 CC the amplicon. From the ratio of labels hybridised to the two classes of
 CC oligomers, the degree of methylation is calculated. The method is used:
 CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
 CC and of a wide range of diseases, e.g. cancer, disorders of the central
 CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
 CC particularly by detecting mutations or single nucleotide polymorphisms
 CC (SNP's); and (ii) for differentiation of cell or tissue types and for
 CC investigating cell differentiation. The method allows the methylation
 CC status of many C residues to be determined simultaneously. ABQ13410-
 CC ABQ5412 represent genomic DNA sequences used to illustrate the method
 CC for determining the degree of cytosine methylation described in the
 CC disclosure of the invention

CC encode promoter components of the cellular activation and transcription
CC apparatus (5' cis regulatory DNA sequences). The sequences may be used in
CC the modification of gene activation and/or expression in eukaryotes,
CC especially rice and other monocots. They have many applications in
CC standard molecular biology, e.g. as for chromosome and gene mapping, in
CC polymerase chain reaction (PCR) technology, for the study of gene
CC function and expression in vivo, specific down-regulation of target
CC genes, and in the production of sense and/or antisense nucleic acids. The
CC present sequence represents the coding sequence of rice GAPDH as
CC described in the invention

XX New rice promoter, useful for manipulating crop plants to alter or
 PT improve phenotypic characteristics, e.g. produce large quantities of oil
 PT or proteins, resistance to insecticides, virus or fungi, stress tolerance
 PT or high nutritional value.

XX Claim 26; SEQ ID NO 1625; 230bp; English.

XX The invention relates to plant nucleotide sequences that direct seed-,
 CC leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential
 CC or constitutive transcription of an operatively linked nucleic acid
 CC segment. The invention also relates to a method for augmenting a plant
 CC genome and a method of identifying a gene, where its expression is
 CC altered in the seed, leaf, stem, panicle, pollen, root or is constitutive
 CC in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,
 CC canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,
 CC sorghum, rice or wheat. The polynucleotides and the polypeptides they
 CC encode are useful for manipulating crop plants to alter or improve
 CC phenotypic characteristics, to produce large quantities of oil or
 CC proteins, to incur resistance to insecticides, viruses or fungi, and to
 CC incur stress tolerance (e.g. salt, cold or drought) to ensure the plants
 CC have a high nutritional value with reduced apical dominance or dwarfism,

CC early flowering or altered metabolic pathways. This sequence represents a
 CC plant nucleic acid of the invention. Note: The sequence data for this
 CC patent did not form part of the printed specification but was obtained in
 CC electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

XX Nucleic acid comprising fragment of chemically modified gene, useful for
 PT diagnosis and treatment of diseases associated with abnormal cytosine
 PT methylation.

XX Claim 1; SEQ ID NO 155; 32bp + Sequence Listing; German.

XX The present invention provides a number of human immune system associated
 CC genes which are modified by the methylation of cytosines. The sequences
 CC can be used in the diagnosis and treatment of immune system disorders,
 CC including eye diseases such as retinopathy, neovascular glaucoma and
 CC macular degeneration, arteriosclerosis, anemia, cancer, acute myeloid
 CC leukemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
 CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
 CC diseases. The present sequence is a gene of the invention

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 225; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumor suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumor suppressor genes and oncogenes. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

 PT Predicting responsiveness of a subject with breast cell proliferative
 PT disorder, useful for treating or differentiating breast cell
 PT proliferative disorders comprises analyzing methylation pattern of a
 PT genomic DNA from the subject.
 XX
 PS Claim 25; SEQ ID NO 456; 104bp; English.
 XX
 CC The invention relates to a novel method for predicting the responsiveness
 CC of a subject with a cell proliferative disorder of the breast tissues to
 CC a therapy comprising analysing the methylation pattern of a target
 CC nucleic acid by contacting at least one of the target nucleic acids in a
 CC biological sample obtained from the subject prior to or during treatment.
 CC The method of the invention has cytosstatic activity, and may have a use
 CC in gene therapy. The set of oligonucleotides comprising at least two of
 CC the oligomers are useful for detecting the cytosine methylation state
 CC and/or single nucleotide polymorphisms (SNPs) within the sequences. The
 CC method, nucleic acid, oligonucleotide, and kit are useful for the
 CC treatment, characterisation, classification and/or differentiation, of
 CC breast cell proliferative disorders. The method is also useful for
 CC predicting the responsiveness of a subject with a cell proliferative
 CC disorder of the breast tissues to a therapy. The present sequence is used
 CC in the exemplification of the invention.

PT
XX
XX Claim 1; SEQ ID NO 93; 23bp; English.
PS
XX
XX The invention relates to nucleic acid sequences comprising at least 18
CC bases of a chemically pretreated gene associated with gene regulation,
CC selected from 94 genes (ABL49301-ABL49394) and/or complementary sequences
CC associated with DNA replication, CENPB, DNA2L, ATR, CHD1L, ERCC3, SNRPB,
CC RAD50 and LIG2. The chemical pretreatment converts cytosine bases
CC to methylated at the 5-position to uracil or another base with
CC hybridisation behaviour dissimilar to cytosine, to enable analysis of
CC cytosine methylations. The DNA sequences and method are useful in the
CC diagnosis of diseases (or predisposition to diseases) associated with DNA
CC replication and in therapy of such diseases, by enabling analysis of the
CC cytosine methylation patterns of such genes. They are especially useful
CC in diagnosis and therapy of e.g. Ataxia telangiectasia, ATR-X, Bloom's
CC syndrome, solid tumours and cancer. Note: The sequence data for this
CC patent did not form part of the printed specification and was supposed to
CC be available directly from WIPO at
CC ftp.wipo.int/pub/published_pat_sequences. However, the sequence data did
CC not correspond to that referred to in the specification. The present data
CC is taken from EPO data for the patent

 PT Oligonucleotide for diagnosis and therapy of diseases associated with
 PT signal transduction e.g. cancer, comprises chemically modified genomic
 PT sequences of genes associated with signal transduction.
 XX
 PS Claim 1; SEQ ID NO 77; 24bp; English.
 CC
 CC The present invention relates to chemically modified DNA sequences of
 CC signal transduction associated genes. The DNA sequences are chemically
 CC modified using a solution of bisulphite, hydrogen sulphite or disulphite.
 CC Also disclosed are oligonucleotides and/or PNA oligomers for detecting
 CC the cytosine methylation state (CpG islands) of these genes, and a method
 CC for the diagnosis and/or therapy of genetic and epigenetic parameters of
 CC genes associated with signal transduction. The genomic DNA can be

CC obtained from cells or cellular components which contain DNA, e.g. cell
 CC lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,
 CC tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
 CC brain, heart, prostate, lung, breast or liver, histologic object slides,
 CC and all their possible combinations. The sequences of the invention are
 CC useful for the diagnosis and therapy of diseases associated with signal
 CC transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent
 CC chemically pretreated genomic DNA sequences of different genes associated
 CC with signal transduction, or their complementary sequences. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from the
 CC European Patent Office

 XX
 PS Claim 1; SEQ ID NO 81; 24bp + Sequence Listing; English.
 CC
 CC The invention relates to a nucleic acid comprising a sequence of at least
 CC 18 bases of a segment of chemically pretreated DNA of genes associated
 CC with cell signaling. The activity of the modified sequence of the
 CC invention may be described as cytostatic. The object of the invention is
 CC to provide the chemically modified DNA of genes associated with cell
 CC signalling, as well as oligonucleotides and/or PNA-oligomers for
 CC detecting cytosine methylations, as well as a method which is
 CC particularly suitable for the diagnosis and/or therapy of genetic and
 CC epigenetic parameters of genes associated with cell signaling. The
 CC chemically modified DNA provided by the invention is useful for diagnosis
 CC and therapy of diseases such as solid tumours and cancer. The sequences
 CC given in records ABL70111-ABL70626 represent chemically pre-treated
 CC genomic DNA's of genes associated with cell signaling. Note: The

CC sequence data for this patent is not represented in the printed
CC specification, but is based on sequence information supplied by the

PT New nucleic acid sequences from chemically modified genes associated with
PT gene regulation, useful for analyzing cytosine methylations for diagnosis
PT and therapy of diseases e.g. severe combined immunodeficiency disease.
XX
PS Claim 1; SEQ ID NO 105; 26pp; English.
XX
CC The invention relates to 224 nucleic acid sequences comprising at least
CC 18 bases of a chemically pretreated gene associated with gene regulation
CC selected from 43 known genes (or complementary sequences). The chemical
CC pretreatment converts cytosine bases unmethylated at the 5-position to
CC uracil or another base with hybridisation behaviour dissimilar to
CC cytosine, to enable analysis of cytosine methylations. The DNA sequences,
CC oligomers (or sets/array) and method are useful in the diagnosis of
CC diseases (or predisposition to diseases) associated with gene regulation
CC and in therapy of such diseases, by enabling analysis of the cytosine
CC methylation patterns of such genes. Kits are provided. They are
CC especially useful in diagnosis and therapy of e.g. severe combined
CC immunodeficiency disease, cardiac disorders, haemophilia, solid tumours
CC and cancer, Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen
CC syndrome, renal disease, preeclampsia, graft versus-host disease. The
CC present sequence is a sequence included in the sequence data for this

CC specification and is associated with the human gene regulation-associated
CC genes. Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 241; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC dinucleotide, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analyzing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences

PT Detecting and distinguishing colorectal cell proliferative disorders by
PT contacting genomic DNA of biological sample with reagent that
PT distinguishes methylated and non-methylated CpG dinucleotides within
PT target sequence of genomic DNA.
XX
XX
PS Claim 11; SEQ ID NO 293; 23pp; English.
XX
XX The invention relates to a novel method for detecting and distinguishing
CC between, or among, colorectal cell proliferative disorders. The method
CC involves contacting genomic DNA of a biological sample obtained from the
CC subject with one or more reagent(s), or a series of reagents that
CC distinguishes between methylated and non-methylated CpG dinucleotides
CC within a target sequence of the genomic DNA. The invention further
CC comprises: a nucleic acid comprising a sequence of 18 or more contiguous
CC nucleotides of a treated genomic DNA sequence chosen from any one of 284
CC fully defined nucleotide sequences, whose sequence listing is not
CC provided in the specification, and their complementary sequences, where
CC the contiguous sequence has one or more CpG, Tpa, or Cpa dinucleotide,
CC and the treatment is suitable to convert one or more of the unmethylated
CC cytosine base(s) of the genomic DNA sequence initially to uracil or
CC another base that is detectably dissimilar to cytosine in terms of
CC hybridization; an oligomer or peptide nucleic acid (PNA)-oligomer,
CC comprising 9 or more contiguous nucleotides that is complementary to or
CC hybridizes under moderately stringent or stringent conditions to one of
CC the 284 DNA sequences and their complementary sequences provided in the
CC source document, which is treated; a set of oligomers comprising two or
CC more of the oligomer of PNA-oligomer; an array of oligomers; and a kit
CC for carrying out the above methods. The method and its novel compositions
CC have cytosine activity. The polynucleotide sequence may be used in gene
CC therapy. The above methods are useful for detecting and distinguishing
CC between, or among, colorectal cell proliferative disorders chosen from
CC colorectal carcinoma, colon adenomas and colon polyps, in a biological
CC sample, such as histological slides, biopsies, paraffin embedded tissue,
CC bodily fluids, stool, blood, serum, plasma and their combinations. The
CC oligomer array is useful as a probe for detecting one or more of the
CC cytosine methylation state, or single nucleotide polymorphisms within the
CC genomic DNA or their complementary sequences. The polynucleotides of the
CC invention are useful for classifying, distinguishing between, or among,
CC diagnosing or determining the predisposition for colorectal cell
CC proliferative disorders, or for the therapy of colorectal cell
CC proliferative disorders. This polynucleotide sequence represents a DNA
CC fragment associated with the development of colon cell proliferative
CC disorders, used in the novel methylated/non-methylated CpG dinucleotide
CC detection method of the invention. Note: This sequence is not shown in
CC the specification. It has been electronically downloaded from the USPTO
CC website.

XX
CC The invention relates to novel genes (AAL07060-AAL07066) and proteins
CC (AAB03087-AB04109) associated with the musculoskeletal system useful for
CC preventing, treating or ameliorating medical conditions e.g. by protein
CC or gene therapy. The genes are isolated from a range of human tissues
CC disclosed in the specification. The nucleic acids, proteins, antibodies
CC and (ant)agonists are useful in the diagnosis, treatment and prevention
CC of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX		
PT	Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition.	
XX		
PS	Disclosure; SEQ ID NO 9748; 1297bp + Sequence listing; English.	
XX		
CC	The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention

High-throughput generation of sequence indexes from T-DNA
 mutagenized Arabidopsis thaliana lines
 Biotechniques 35 (6), 1164-1168 (2003)

TITLE

4 (bases 1 to 411)

Submitted (31-MAR-2004) Weishaar B., Max-Planck-Institut fuer
 Zuechtungsforchung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
 It indicates an insertion within the locus defined by BAC clone
 F15C21. Details on the protocols used for generation of the
 sequence are described in References 1-3. The sequences are
 generated at the MPI for Plant Breeding Research in the context of
 the GABI-Kat project. GABI-Kat is part of the German Plant Genomics
 program designated 'GABI'. Information on line availability can be
 found at: http://www.mpiz-koeln.mpg.de/GABI-Kat/.

 /note="PCR was performed on DNA from Arabidopsis thaliana plants (T1) which were transformed with the T-DNA from vector pAC161 (Genbank accession number: AJ537514). The lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed."

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. cDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer
Genomforschung GmbH (<http://www.rzpd.de>).

 ----- Summary Statistics
 Center project name: H_NH0074M11
 Drafting Center: WIBR

NOTICE:

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:

The RRC1-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,B., Tachio,M., Catalane,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.reagen.com) or Pieter de Jong and coworkers at http://www.chori.org

VECTOR: pBAC3.6

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is AC005699, 2000 bp overlap; the clone sequenced to the right is RP11-168E17. Actual end of this clone is at base position 149964 of RP11-74M11.

Data from AC024335 was used to finish this clone, AC024968.

The sequence of AC024968 has been incorporated into AC104686.

----- NOTE: This is a 'working draft' sequence. It currently
 * consists of 26 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

Rat Genome Sequencing Consortium.

Direct Submission
Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 13, 2003 this sequence version replaced gi:23268120.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Summary Statistics
Assembly program: Atlas 3.0
Consensus quality: 245471 bases at least Q40
Consensus quality: 248216 bases at least Q30
Consensus quality: 250042 bases at least Q20
Estimated insert size: 254905; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 14 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will

FEATURES
source
* be preserved.

COMMENT
 NOTICE: This sequence may not be the entire insert of this clone.
 It may be shorter because we only sequence overlapping sections
 once, or longer because we provide a small overlap between
 neighboring submissions.
 This sequence was finished as follows unless otherwise noted: all
 regions were double stranded, sequenced with an alternate chemistry
 or covered by high quality data (i.e., phred quality >= 30); an
 attempt was made to resolve all sequencing problems, such as
 compressions and repeats; all regions were covered by sequence from
 more than one m3 subclone.
 For a graphical representation of this clone sequence and its
 analysis see:
<http://www.wormbase.org/db/seq/sequence?name=W03G1;class=Sequence>

NEIGHBORING CLONE INFORMATION

The 5' clone is Y65D7A, 200 bp overlap; the 3' clone is F09C11, 200
 bp overlap. Actual start of this clone is at base position 1 of
 W03G1, actual end is at 37609 of W03G1.

NOTES:

Coding sequences below are the result of integration and manual
 review of the following data: computer analysis using the program
 GeneFINDER (P. Green and L. Hillier, personal communication), the
 large scale EST projects of Yujin Kohara
 (http://www.ddj.nig.ac.jp/c-elegans/hm1/CE_INDEX.html) and The C.
 elegans ORFeome cloning project (<http://wordfidd.dcel.harvard.edu/>),
 similarity to other proteins from BlastX analyses
 (<http://blast.wustl.edu/>), sequence conservation with C. briggsae
 using Jim Kent's WABA alignment program (Genome Research
 10:1115-1125, 2000), individual C. elegans GenBank submissions,
 and personal communications with C. elegans researchers. tRNAs
 are predicted using the program tRNAscan-SB (Lowe, T.M. and
 Eddy, S.R., 1997, Nucleic Acids. Res., 25, 955-964).

* NOTE: This record contains 83 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
* 1 689: contig of 689 bp in length

Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Jul 17, 2001 this sequence version replaced gi:13751266.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone configs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at
http://www.sanger.ac.uk/HGP/ChrX
RP3-438D16 is from the library RP3-3 constructed by the group of P. Pierce de Jong. For further details see
http://www.chori.org/bacpac/home.htm
VECTOR: pCYPAC2

FEATURES

source

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

COMMENT
BAC clone F15C21 is from Arabidopsis thaliana chromosome 1
The orientation of the sequence is from SP6 to T7 end of the BAC
clone.
Genes were identified by a combination of several methods: Gene
prediction programs including Genscan+ (Chris Burge,
http://CCR-081.mt.edu/GENSCAN.html), GenemarkEM (Mark Borodovsky,
http://genemark.biology.gatech.edu/Genemark/), GlimmerA (a variant
of GlimmerM, see Mihaela Pertea,
http://www.tigr.org/softlab/glimmer.htm/glimmerm.html, and
Gensplicer (Mihaela Pertea and Steven Salzberg, contact
mpertea@tigr.org), searches of the complete sequence against a
peptide database and the plant EST database at TIGR
(http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to
indicate the level of evidence for their annotation. Genes with
similarity to other proteins are named after the database hits.
Genes without significant peptide similarity but with EST
similarity are named as unknown proteins. Genes without protein
or EST similarity, that are predicted by more than two gene
prediction programs over most of their length are annotated as
hypothetical proteins. Genes encoding tRNAs are predicted by
tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).
Simple repeats are identified by repeatmasker (Arjan Smit,
http://ftp.genome.washington.edu/RM/RepeatMasker.html).

 AUTHORS Worley K.C.
 TITLE Direct Submission
 JOURNAL Submitted (13-MAR-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
 On Sep 30, 2002 this sequence version replaced gi:22901969.
 INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases.

Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:

<http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

-----Summary Statistics
Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 141691 bases at least Q40
Consensus quality: 148023 bases at least Q30
Consensus quality: 150880 bases at least Q20
Insert size: 155000; agarose-fp
Insert size: 155023; sum-of-contigs
Quality coverage: 4.1 in Q20 bases; sum-of-contigs
Quality coverage: 4.1 in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 26 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

JOURNAL Submitted (29-JAN-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT On Jan 25, 2003 this sequence version replaced gi:27819428.
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: <http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.
